Installing Steering Wheel Quick Release

Written By: Brian Sallee

TOOLS:

- Phillips Screwdriver (1)
- conductivity tester (1)

PARTS:

- NRG Innovations Quick Release (1)

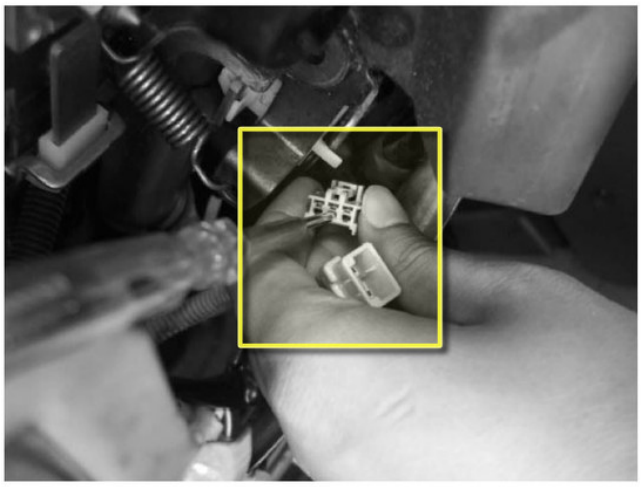
SUMMARY

Follow our easy step-by-step instructions to install your NRG Innovations Steering Wheel Quick Release

Step 1 — Steering Wheel Removal

- Make Sure the steering wheel is straight, and remove the factory steering wheel and airbag
- Warning: Use caution when removing steering wheels equipped with airbags
- Refer to vehicle's service manual for instructions on removing the factory wheel
- Remove the airbag SRS reel, take apart the dash/column panels and disconnect the reel from all wiring harnesses

Step 2

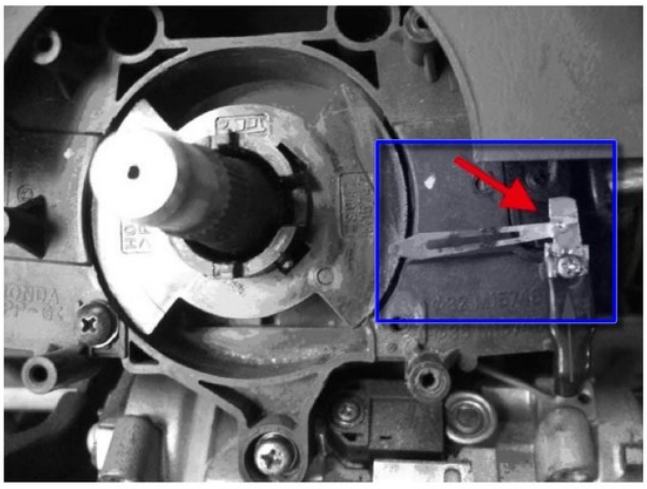


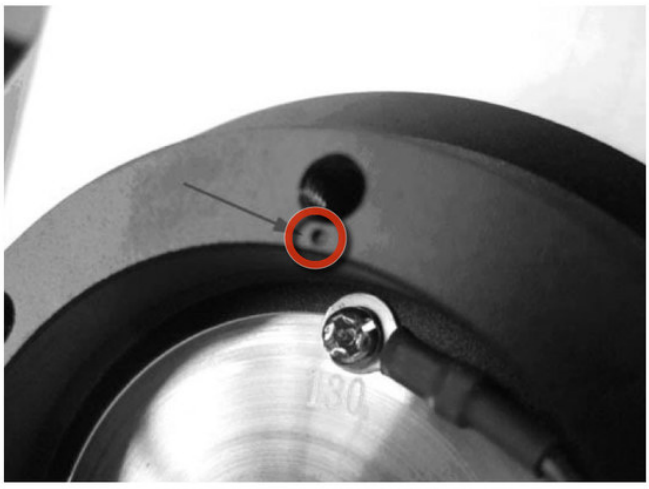
- Using a conductivity tester, locate the horn wire on the harness.
- Clamp a pin connector to a wire and plug it into the horn wire harness. Run the wire up the steering column.

Step 3

- Find something that will conduct electricity that is thin and has good flexibility.
- We had an old hair clip lying around, and that will serve as our horn contact. (We've also found that other installers have used a variety of things from OEM Shoehorns to cotter pins and conductors.)
- We modified the hair clip like so.

Step 4





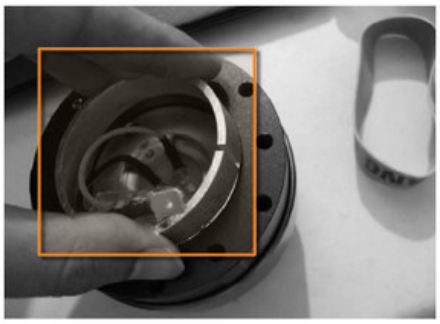
- Bolt this wire up to the turn signal/wire switch base.
- You will need to figure out how to bolt or screw the turn signal wire to the base.
- Make sure that the horn contact that was just created contacts the rear of the short hub. The horn connector may need to be bent to accommodate the short hub
- Notice the little dot on the short hub. The dot signifies that the hub is in the up position. Bolt the hub in upward position

Step 5

- Connect the wires from the base of the quick release to the wires coming from the short hub.
- Caution: The yellow wire will be the hot wire, so connect accordingly.

- Bolt down the quick release base to the short hub with the supplied screws.
- Do not forget about the dot signifying the up position. The dot also appears on the base of the quick release.

Step 6



- Insert the horn button retainer ring into the top of the quick release body
- When installing the steering wheel, the components go in this order: **Ring garnish** (if applicable), **Horn button, Steering Wheel, Quick release base**
- Remember to align the top dots and of course connect the horn wires accordingly.

- Remember to align the top dots and connect the horn wires accordingly.

Congratulations! You have completed the installation of your NRG Steering Wheel Quick Release.
